NOTE 1: The New England Common Assessment Program (NECAP) Science Assessment is the result of collaboration among New Hampshire, Rhode Island, and Vermont to build a set of tests for grades 4, 8, and 11 to meet Federal requirements for science testing. The purposes of the NECAP Science tests are as follows: (1) provide data on student achievement in science at grades 4, 8, and 11 to meet the requirements of ESSA; (2) provide information to support program evaluation and improvement; and (3) provide information regarding student and school performance to both parents and the public. The tests are constructed to meet rigorous technical criteria, to include universal design elements and accommodations to allow all students access to test content, and to gather reliable student demographic information for accurate reporting. It is important to note that NECAP results are provided to districts, schools, and families for use as one piece of evidence about progress and learning that occurred on the respective grade-span expectations (GSEs) of elementary (K-4), middle (5-8) and high schools (9-11).

NOTE 2: Throughout this report, ***statistical significance*** is reported to indicate whether reported differences (e.g., increases or decreases in the percentage of students achieving *proficiency* or higher) in this year's NECAP results are *significantly* different from results reported in previous years. For each table presented in this report, please note the key to determine the meaning of color-coded cells. In general, if a cell is colored **green**, then the reported difference indicates that the percentage of students achieving *proficiency* or higher, for example, is statistically significantly ***higher*** than previous results whereas if the cell is **red**, then the reported difference indicates that the percentage of students achieving *proficiency* or higher is statistically significantly ***lower*** than previous results. All other reported differences are thus not considered statistically significant, regardless of how large or small they appear to be. Please see Appendix B for a full discussion on how statistical significance was calculated and how to interpret statistical significance.

NOTE 3: Throughout this report, the percentage of students scoring *Proficient* or higher refers to the cumulative percentage of students scoring at the *Proficient* and *Proficient with Distinction* levels of achievement. See Appendix A for descriptions of each of the levels.

NOTE 4: Multiple data points are needed for trend analysis. A single year's test results provide limited information about a school or district. As with any evaluation, test results are most meaningful when compared with other indicators and when examined over several years for long-term trends in student performance. This is especially true in small schools where changes in student cohorts from year to year can have a noticeable influence on test results. Because measures of student achievement often change incrementally over short periods of time, RIDE presents most state-, district-, and school-level results in this report as a series of multiple-year views in order to reveal achievement trends that have occurred over several years. In addition, RIDE presents last year's results to illustrate a one-year view. In general, over the period between 2008 and 2016, a statistically significant increase indicates improvement that has been sustained. Conversely, a statistically significant decrease indicates a sustained decline in achievement.

¹ School Level in this report refers to Elementary, Middle, and High School.

EXECUTIVE SUMMARY

The ninth administration of the New England Common Assessment Program (NECAP) Science tests took place May 2-26, 2016. A total of 30,323 Rhode Island public school students in grades four, eight, and eleven participated in NECAP Science testing.

STATE-LEVEL RESULTS

Overall Achievement

Results of the spring 2016 NECAP Science tests revealed that at the state level², roughly 29 percent of all Rhode Island public school students were proficient or above in science (down 2 percentage points from the May 2015 administration). While grades 4 and 11 had significantly higher percentages of students achieving proficiency in science compared to the first administration of the science test back in 2008, grade 8 students made no gains compared to their 2008 counterparts. Compared to last year, no grades posted significant gains in 2016. While grade 4 students matched last year's performance of roughly 41 percent achieving proficiency or above, students in grades 8 and 11 posted significant decreases this year of nearly 4 and 6 percentage points, respectively.

Achievement Gaps³

Statewide (*all grades combined*), the achievement gaps in Science this year have narrowed for students with disabilities, English Language Learners (ELLs), and for low income students compared to last year; however, all gaps remain wider than they were back in 2008 and the overall percentage of students achieving proficiency or greater in science continues to be well below the state averages for each of the student groups at all three grade levels tested.

DISTRICT⁴ RESULTS

Compared to last year's results, there was no significant improvement at the district level this year in terms of student achievement in Science. Of Rhode Island's 56 districts that participated in NECAP Science testing, none posted a significant gain in science achievement while 9 posted a significant decrease in overall student performance. For all other districts, scores were essentially the same as last year. By comparison, over the eight-year period from 2008 to 2016, 17 districts posted significant gains (*range: 5 to 43 percentage points higher*) while none posted a significant decrease in overall student performance. For all other districts, scores were essentially the same as they were back in 2008.

SCHOOL RESULTS

Results at the school level mirrored those of district level in that for the vast majority, Science results were not significantly different than last year's. A total of 6 schools posted significant increases in the percentage of students achieving proficiency or above in Science while 15 posted significant decreases. Over the eight-year period from 2008 to 2016, there were a large number of schools that posted gains in Science. A total of 45 schools made gains (*range: 5 to 43 percentage points higher*) while only 7 schools had lower percentages (*range: 2 to 39 percentage points lower*).

² All grades combined for a single aggregated result.

³ An achievement gap is a difference in what distinct groups of students know and can do in important subjects such as reading, math, or science. One way we find achievement gaps is by comparing test performances of different groups of students. One way we describe gaps is by subtracting the average of a lower scoring group from the average of a higher scoring, comparative group.

⁴ Throughout this report, the term "district" is used as an inclusive identifier of both traditional districts and charter schools, both of which are "Local Education Agencies" or LEAs.

⁸ Eligibility for free or reduced price meal benefits through the National School Lunch Program is the most commonly used indicator of economic disadvantage.⁹ An achievement gap is a difference in what distinct groups of students know and can do in important subjects such as reading or math. One way we find achievement gaps is by comparing test scores for groups of students. One way we describe gaps is by subtracting the average of a lower scoring group from the average of a higher scoring group.¹⁰ Because scale scores differ across grades, it is not possible to create an aggregated "state" scale score for comparison purposes in this table.

DISTRICT RESULTS

Table 9. Percent of Students At/Above “Proficient” in Science by District and School Level.

“Minimum Cell Size” Reporting Policy

RIDE Policy on minimum cell size for reporting data stipulates that if the number of students is less than 10 for any group(s) or for any school- and district-level reporting or if a percentage is less than 1% or greater than 99%, then data must be suppressed in public reports to ensure confidentiality of individual student results and to discourage generalizations about school performance based on very small populations. Throughout this report, empty cells indicate that the number of students included in calculations was less than 10 or the percentage was less than 1% or greater than 99%.

NECAP Performance Level Descriptors

- ***Proficient with Distinction:*** Students performing at this level demonstrate the prerequisite knowledge and skills needed to participate and excel in instructional activities aligned with the GSEs at the current grade level. Errors made by these students are few and minor and do not reflect gaps in prerequisite knowledge and skills.
- ***Proficient:*** Students performing at this level demonstrate minor gaps in the prerequisite knowledge and skills needed to participate and perform successfully in instructional activities aligned with the GSE at the current grade level. It is likely that any gaps in prerequisite knowledge and skills demonstrated by these students can be addressed during the course of typical classroom instruction.
- ***Partially Proficient:*** Students performing at this level demonstrate gaps in prerequisite knowledge and skills needed to participate and perform successfully in instructional activities aligned with the GSE at the current grade level. Additional instructional support may be necessary for these students to meet grade level expectations.
- ***Substantially Below Proficient:*** Students performing at this level demonstrate extensive and significant gaps in prerequisite knowledge and skills needed to participate and perform successfully in instructional activities aligned with the GSE at the current grade level. Additional instructional support is necessary for these students to meet grade level expectations.

APPENDIX B

Calculating Standard Error (SE)

For the purposes of this report, *Standard Error (SE)* is defined as a measurement of the standard error of a percentage (e.g., % *Proficient*, used throughout this report). Mathematically, SE's were calculated as follows:

$$(SE) = \sqrt{\left(\frac{pq}{N}\right)}, \text{ where } p \text{ is the percent of students who are proficient, } q = (100-p) \text{ and } N \text{ is the population or group size.}$$

It is important to note that the derived SE is based on the size of the group being examined and its respective performance (read: % *Proficient*) on the NECAP tests. Standard errors can be used to create a confidence interval around the derived percentage so that you can see the range in which the “true” (e.g., measured without error) value is located. To do so, you can take the SE and multiply it by 1.96 (for a 95% confidence interval). The resultant product is then added and subtracted from the percent proficient, *p*, for example, to create a range of values in which you can be 95% confident that the “true” value is located. For example, viewing the percent proficient (*p*) as the center point, if one adds the value of SE(1.96) to *p* and also subtracts this value from *p*, then the full confidence interval is created with both an upper and lower boundary. So, if *p* equals 70% and the SE equals .5, then the product of SE and 1.96 equals .5(1.96) or .965 Adding and subtracting this number from 70% creates the confidence interval, which ranges from 69.04% to 70.97%. This is the range in which one can be 95% confident that the “true” value exists.

When comparing the performance of any two years or groups, we say that the difference in performance between the groups is *statistically significant* if the difference in performance between the two groups is larger than the sum of the SE's of the two groups. In other words, if the sum of the two SE's—each multiplied by 1.96 to get the 95% confidence interval—is larger than the value of the difference in performance between the two groups, then we say the difference is too small to be significant or meaningful because the difference doesn't fall outside of the range of plausible “true” values. To illustrate this point, let's say that 60% of 4th grade students at *School X* were proficient or above in science in 2015 and the following year in 2016, 66% of 4th grade students were proficient or above, thus resulting in an increase of +6 percentage points. If the sum of the 2015 SE(1.96) and the 2016 SE(1.96) is 6.5, then the change from 2015 to 2016 in 4th grade science performance of +6 percentage points at *School X* is not large enough to be considered statistically significant. On the other hand, if 67% of 4th graders in 2016 were proficient or above, then the +7 percentage point increase in performance would be larger than the standard error of 6.5 and this difference would be statistically significant.
