

The RI Department of Education's Statewide Transportation program is introducing My Stop as a new transportation technology to its school bus fleet.

My Stop™ is a one-of-a-kind mobile app integrated with your district's Versatrans® transportation management software that allows you to access estimated times of arrival or departure for your bus, as well as view your student's current bus route. This helps ensure that your student is on the right bus, confirms if they have boarded or disembarked, and verifies that you are on time for pick-ups or drop-offs while making the bus route more efficient.

Just a Few Clicks Away

My Stop is an easy-to-use app to access your student's bus information quickly. On-board GPS technology automatically tracks and calculates bus routes and estimated time of arrival (ETA) to your stop. No more calls to your school district are needed to ask about which bus your student is on or if the bus will be on time; that can now be accessed at the touch of a button. Your student may also access the app if they have a mobile device.

Push notifications can help prevent you from having to frequently check the My Stop app for ETAs. Sign up for notifications to be automatically alerted about changes in your student's bus status.

Getting Started with Versatrans My Stop

My Stop is now available to download on your Apple or Android mobile device. Search your app store for "Versatrans My Stop" to download. When you register yourself on the app, ensure that you change your password at initial log-in to ensure secure login and user management moving forward.

My Stop application will go live on October 1, 2024.
