

PK-5 Integrated STEM Endorsement Provider Information Sheet

Organization Name:
Roger Williams University
Primary Contact(s) Name(s):
Dr. Li-Ling Yang
Phone Number(s):
401-254-3301
E-mail Address(es):
lyang@rwu.edu
Brief explanation of format (e.g., virtual, synchronous, asynchronous):
The five courses required for the STEM Endorsement will be available during both the academic year and summer sessions. These courses will be offered in a flexible format, blending in-person, virtual, and asynchronous components. To accommodate working professionals, all classes during the academic year will be scheduled for late afternoon or evening.
Brief explanation of professional learning experience:
Each of the five STEM courses equips educators with the knowledge, skills, and understanding of grade-level STEM concepts aligned with educational standards. Educators will engage in STEM through real-life applications such as robotics, food science, problem-solving, innovative educational technologies, and interdisciplinary coding projects. Each class activity provides hands-on STEM learning experiences that are adaptable for PK-5 classrooms.
Length of Training and Associated Costs:
Educators can complete the STEM endorsement in two years by taking one course each semester and one course during the summer between Year 1 and Year 2. Alternatively, educators have the flexibility to complete the endorsement requirements at their own pace. Using the current RWU graduate tuition rate of \$748 per credit, the total cost for the 16 credits required for the STEM endorsement is \$11,968.

Great Teachers and Leaders for All Students
