Common Core State Standards / Rhode Island Core Standards Comparison Grades K-12 Mathematics

## Grade K

| Common Core State Standard | Rhode Island Core Standards |
| :--- | :--- |
| K.CC.A.2 <br> Count forward beginning from a given number within the known <br> sequence (instead of having to begin at 1). | K.CC.A.2 <br> Count forward beginning from a given number within the known <br> sequence (instead of having to begin at one). |
| K.CC.A.3 <br> Write numbers from 0 to 20. Represent a number of objects with a <br> written numeral 0-20 (with 0 representing a count of no objects). | No change |
| K.CC.B.4 <br> Understand the relationship between numbers and quantities; connect <br> counting to cardinality. <br> A. When counting objects, say the number names in the standard <br> order, pairing each object with one and only one number name <br> and each number name with one and only one object. | K.CC.B.4 <br> Understand the relationship between numbers and quantities; <br> connect counting to cardinality. <br> A. $\quad$When counting objects, say the number names in the <br> standard order, pairing each object with one and only one <br> number name and each number name with one and only one <br> object. <br> Bnderstand that the last number name said tells the number of <br> objects counted. The number of objects is the same regardless of <br> their arrangement or the order in which they were counted. <br> C. Understand that each successive number name refers to a <br> quantity that is one larger. <br> Bnderstand that the last number name said tells the number <br> of objects counted. The number of objects is the same <br> regardless of their arrangement or the order in which they <br> were counted. |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

|  | C.Understand that each successive number name refers to a <br> quantity that is one larger. Recognize the one more pattern <br> of counting using objects <br> K.CC.B.5 <br> Count to answer "how many?" questions about as many as 20 things <br> arranged in a line, a rectangular array, or a circle, or as many as 10 <br> things in a scattered configuration; given a number from 1-20, count <br> out that many objects. <br> K.CC.C.6 <br> Identify whether the number of objects in one group is greater than, <br> less than, or equal to the number of objects in another group, e.g., by <br> using matching and counting strategies.* <br> * Include groups with up to ten objects. <br> K.CC.C.7 <br> Compare two numbers between 1 and 10 presented as written <br> numerals. <br> K.OA.A.1 <br> Identify whether the number of objects in one group is greater than, <br> less than, or equal to the number of objects in another group for <br> groups with up to 10 objects, e.g., by using matching and counting <br> strategies. <br> Represent addition and subtraction with objects, fingers, mental <br> explanations, expressions, or equations. |
| :--- | :--- |
| *Drawings need not show details, but should show the mathematics in <br> the problem. (This applies wherever drawings are mentioned in the | No change |
| Standards.) | No change |
| K.OA.A.2 <br> Solve addition and subtraction word problems, and add and subtract <br> within 10, e.g., by using objects or drawings to represent the problem. | No change |

## RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| K.OA.A.3 <br> Decompose numbers less than or equal to 10 into pairs in more than <br> one way, e.g., by using objects or drawings, and record each <br> decomposition by a drawing or equation (e.g., $5=2+3$ and $5=4+1$ ). | No change |
| :--- | :--- |
| K.OA.A.4 <br> For any number from 1 to 9, find the number that makes 10 when <br> added to the given number, e.g., by using objects or drawings, and <br> record the answer with a drawing or equation. | No change |
| K.OA.A.5 <br> Fluently add and subtract within 5. |  |
| K.NBT.A.1 <br> Compose and decompose numbers from 11 to 19 into ten ones and <br> some further ones, e.g., by using objects or drawings, and record each <br> composition or decomposition by a drawing or equation (e.g., $18=10+$ <br> 8); understand that these numbers are composed of ten ones and one, <br> two, three, four, five, six, seven, eight, or nine ones. | No change |
| K.MD.A.1 <br> Describe measurable attributes of objects, such as length or weight. <br> Describe several measurable attributes of a single object. | Fluently add and subtract within 5 including zero. |
| K.MD.A.2 <br> Directly compare two objects with a measurable attribute in common, <br> to see which object has "more of" / "less of" the attribute, and describe <br> the difference. For example, directly compare the heights of two <br> children and describe one child as taller/shorter. | No change |
| K.MD.B.3 <br> Classify objects into given categories; count the numbers of objects in <br> each category and sort the categories by count.* | K.MD.B.3 |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| *Limit category counts to be less than or equal to 10. | Classify objects into given categories; count the numbers of objects <br> in each category (up to and including 10) and sort the categories by <br> count. |
| :--- | :--- |
| K.G.A.1 <br> Describe objects in the environment using names of shapes, and <br> describe the relative positions of these objects using terms such as <br> above, below, beside, in front of, behind, and next to. | No change |
| K.G.A.2 <br> Correctly name shapes regardless of their orientations or overall size. | No change |
| K.G.A.3 <br> Identify shapes as two-dimensional (lying in a plane, "flat") or three- <br> dimensional ("solid"). | No change |
| K.G.B.4 <br> Analyze and compare two- and three-dimensional shapes, in different <br> sizes and orientations, using informal language to describe their <br> similarities, differences, parts (e.g., number of sides and <br> vertices/"corners") and other attributes (e.g., having sides of equal <br> length). | No change |
| K.G.B.5 <br> Model shapes in the world by building shapes from components (e.g., <br> sticks and clay balls) and drawing shapes. | No change |
| K.G.B.6 <br> Compose simple shapes to form larger shapes. For example, "Can you <br> join these two triangles with full sides touching to make a rectangle?" | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Grade 1 |  |
| :---: | :---: |
| Common Core State Standard | Rhode Island Core Standards |
| 1.OA.A. 1 <br> Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. | 1.OA.A. 1 <br> Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations (number sentences) with a symbol for the unknown number to represent the problem. |
| 1.OA.A. 2 <br> Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem | No change |
| 1.OA.B. 3 <br> Apply properties of operations as strategies to add and subtract. Examples: If $8+3=11$ is known, then $3+8=11$ is also known. (Commutative property of addition.) To add $2+6+4$, the second two numbers can be added to make a ten, so $2+6+4=2+10=12$. <br> (Associative property of addition.) | 1.OA.B. 3 <br> Apply properties of operations to add and subtract. For example, when adding numbers order does not matter. If $8+3=11$ is known, then $3+8=11$ is also known (Commutative property of addition). To add $2+6+4$, the second two numbers can be added to make a ten, so $2+6+4=2+10=12$ (Associative property of addition). When adding zero to a number, the result is the same number (Identity property of zero for addition). |
| 1.OA.B. 4 <br> Understand subtraction as an unknown-addend problem. For example, subtract $10-8$ by finding the number that makes 10 when added to 8 . | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| 1.OA.C. 5 <br> Relate counting to addition and subtraction (e.g., by counting on 2 to add 2). | No change |
| :---: | :---: |
| 1.OA.C. 6 <br> Add and subtract within 20, demonstrating fluency for addition and subtraction within 10 . Use strategies such as counting on; making ten (e.g., $8+6=8+2+4=10+4=14$ ); decomposing a number leading to a ten (e.g., $13-4=13-3-1=10-1=9$ ); using the relationship between addition and subtraction (e.g., knowing that $8+4=12$, one knows $12-8=4$ ); and creating equivalent but easier or known sums (e.g., adding $6+7$ by creating the known equivalent $6+6+1=12+1=$ 13). | 1.OA.C. 6 <br> Add and subtract within 20, demonstrating fluency for addition and subtraction within 10 . Use mental strategies such as counting on; making 10 (e.g., $8+6=8+2+4=10+4=14$ ); decomposing a number leading to a 10 (e.g., $13-4=13-3-1=10-1=9$ ); using the relationship between addition and subtraction (e.g., knowing that $8+4=12$, one knows $12-8=4$ ); and creating equivalent but easier or known sums (e.g., adding $6+7$ by creating the known equivalent $6+6+1=12+1=13)$. |
| 1.OA.D. 7 <br> Understand the meaning of the equal sign, and determine if equations involving addition and subtraction are true or false. For example, which of the following equations are true and which are false? $6=6,7=8-1$, $5+2=2+5,4+1=5+2$. | No change |
| 1.OA.D. 8 <br> Determine the unknown whole number in an addition or subtraction equation relating to three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations $8+?=11,5=-3,6+6=$. | No change |
| 1.NBT.A. 1 <br> Count to 120 , starting at any number less than 120 . In this range, read and write numerals and represent a number of objects with a written numeral. | No change |
| 1.NBT.B. 2 | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Understand that the two digits of a two-digit number represent amounts of tens and ones. Understand the following as special cases: <br> A. 10 can be thought of as a bundle of ten ones - called a "ten." <br> B. The numbers from 11 to 19 are composed of a ten and one, two, three, four, five, six, seven, eight, or nine ones. <br> C. The numbers $10,20,30,40,50,60,70,80,90$ refer to one, two, three, four, five, six, seven, eight, or nine tens (and 0 ones). |  |
| :---: | :---: |
| 1.NBT.B. 3 <br> Compare two two-digit numbers based on meanings of the tens and ones digits, recording the results of comparisons with the symbols $>,=$, and <. | No change |
| 1.NBT.C. 4 <br> Add within 100, including adding a two-digit number and a one-digit number, and adding a two-digit number and a multiple of 10 , using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. Understand that in adding two-digit numbers, one adds tens and tens, ones and ones; and sometimes it is necessary to compose a ten. | No change |
| 1.NBT.C. 5 <br> Given a two-digit number, mentally find 10 more or 10 less than the number, without having to count; explain the reasoning used. | 1.NBT.C. 5 <br> Given a two-digit number, mentally find 10 more or 10 less than the number, without having to count; explain the reasoning used. Identify arithmetic patterns of 10 more and 10 less than using strategies based on place value. |
| 1.NBT.C. 6 <br> Subtract multiples of 10 in the range 10-90 from multiples of 10 in the range 10-90 (positive or zero differences), using concrete models or | No change |

## RIDE

| drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. |  |
| :---: | :---: |
| 1.MD.A. 1 <br> Order three objects by length; compare the lengths of two objects indirectly by using a third object. | No change |
| 1.MD.A. 2 <br> Express the length of an object as a whole number of length units, by laying multiple copies of a shorter object (the length unit) end to end; understand that the length measurement of an object is the number of same-size length units that span it with no gaps or overlaps. Limit to contexts where the object being measured is spanned by a whole number of length units with no gaps or overlaps. | No change |
| 1.MD.B. 3 <br> Tell and write time in hours and half-hours using analog and digital clocks. | No change |
| 1.MD.C. 4 <br> Organize, represent, and interpret data with up to three categories; ask and answer questions about the total number of data points, how many in each category, and how many more or less are in one category than in another. | No change |
| No CCSS | 1.MD.D. 5 (Added by Massachusetts) <br> Identify the values of all U.S. coins and know their comparative values (e.g., a dime is of greater value than a nickel). Find equivalent values (e.g., a nickel is equivalent to 5 pennies). Use appropriate notation (e.g., 69¢). Use the values of coins in the solutions of problems (up to 100 ¢ ). |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| 2.OA.B. 2 <br> Fluently add and subtract within 20 using mental strategies. By end of Grade 2, know from memory all sums of two one-digit numbers. | 2.OA.B. 2 <br> Fluently add and subtract within 20 using mental strategies. By end of grade 2, know from memory all sums of two single-digit numbers and related differences. For example, the sum $6+5=11$ has related differences of $11-5=6$ and $11-6=5$. |
| :---: | :---: |
| 2.OA.C. 3 <br> Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2 s ; write an equation to express an even number as a sum of two equal addends. | No change |
| 2.OA.C. 4 <br> Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal addends. | 2.OA.C. 4 <br> Use addition to find the total number of objects arranged in rectangular arrays with up to five rows and up to five columns; write an equation to express the total as a sum of equal addends. |
| 2.NBT.A. 1 <br> Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones; e.g., 706 equals 7 hundreds, 0 tens, and 6 ones. Understand the following as special cases: <br> A. 100 can be thought of as a bundle of ten tens - called a "hundred." <br> B. The numbers $100,200,300,400,500,600,700,800,900$ refer to one, two, three, four, five, six, seven, eight, or nine hundreds (and 0 tens and 0 ones). | No change |
| 2.NBT.A. 2 <br> Count within 1000; skip-count by 5 s, 10 s, and 100 s. | 2.NBT.A. 2 <br> Count within 1000 ; skip-count by $5 \mathrm{~s}, 10 \mathrm{~s}$, and 100s. Identify patterns in skip counting starting at any number. |

## (4) RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| 2.NBT.A.3 <br> Read and write numbers to 1000 using base-ten numerals, number <br> names, and expanded form. | No change |
| :--- | :--- |
| 2.NBT.A.4 <br> Compare two three-digit numbers based on meanings of the hundreds, <br> tens, and ones digits, using $>,=$, and < symbols to record the results of <br> comparisons. | No change |
| 2.NBT.B.5 <br> Fluently add and subtract within 100 using strategies based on place <br> value, properties of operations, and/or the relationship between <br> addition and subtraction. | No change |
| 2.NBT.B.6 <br> Add up to four two-digit numbers using strategies based on place value <br> and properties of operations. | No change |
| 2.NBT.B.7 <br> Add and subtract within 1000, using concrete models or drawings and <br> strategies based on place value, properties of operations, and/or the <br> relationship between addition and subtraction; relate the strategy to a <br> written method. Understand that in adding or subtracting three-digit <br> numbers, one adds or subtracts hundreds and hundreds, tens and tens, <br> ones and ones; and sometimes it is necessary to compose or <br> decompose tens or hundreds. | No change |
| 2.NBT.B.8 <br> Mentally add 10 or 100 to a given number 100-900, and mentally <br> subtract 10 or 100 from a given number 100-900. | No change |
| 2.NBT.B.9 | No change |

## 4. RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Explain why addition and subtraction strategies work, using place value <br> and the properties of operations. |  |
| :--- | :--- |
| 2.MD.A.1 <br> Measure the length of an object by selecting and using appropriate <br> tools such as rulers, yardsticks, meter sticks, and measuring tapes. | No change |
| 2.MD.A.2 <br> Measure the length of an object twice, using length units of different <br> lengths for the two measurements; describe how the two <br> measurements relate to the size of the unit chosen. | No change |
| 2.MD.A.3 <br> Estimate lengths using units of inches, feet, centimeters, and meters. | No change |
| 2.MD.A.4 <br> Measure to determine how much longer one object is than another, <br> expressing the length difference in terms of a standard length unit. | No change |
| 2.MD.B.5 <br> Use addition and subtraction within 100 to solve word problems <br> involving lengths that are given in the same units, e.g., by using <br> drawings (such as drawings of rulers) and equations with a symbol for <br> the unknown number to represent the problem. | No change |
| 2.MD.B.6 <br> Represent whole numbers as lengths from 0 on a number line diagram <br> with equally spaced points corresponding to the numbers $0,1,2, .$, and <br> represent whole-number sums and differences within 100 on a number <br> line diagram. | No change |

## A. RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| 2.MD.C. 7 <br> Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m. | 2.MD.C. 7 <br> Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m. <br> A. Know the relationships of time, including seconds in a minute, minutes in an hour, hours in a day, days in a week; days in a month and a year and approximate number of weeks in a month and weeks in a year. |
| :---: | :---: |
| 2.MD.C. 8 <br> Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies using \$ and C symbols appropriately. Example: If you have 2 dimes and 3 pennies, how many cents do you have? | 2.MD.C. 8 <br> Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies (up to \$10), using \$ and $¢$ symbols appropriately and whole dollar amounts. For example, if you have 2 dimes and 3 pennies, how many cents do you have? If you have $\$ 3$ and 4 quarters, how many dollars or cents do you have? (Students are not expected to use decimal notation.) |
| 2.MD.D. 9 <br> Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units. | 2.MD.D. 9 <br> Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Organize and record data on a line plot (dot plot) where the horizontal scale is marked off in whole-number units. |
| 2.MD.D. 10 <br> Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple puttogether, take-apart, and compare problems using information presented in a bar graph. | No Change |
| 2.G.A. 1 <br> Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces. ${ }^{5}$ Identify triangles, | No Change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| squares, rectangles, rhombuses, trapezoids, pentagons, hexagons, and cubes. |  |
| :---: | :---: |
| 2.G.A. 2 <br> Partition a rectangle into rows and columns of same-size squares and count to find the total number of them. | No change |
| 2.G.A. 3 <br> Partition circles and rectangles into two, three, or four equal shares, describe the shares using the words halves, thirds, half of, a third of, etc., and describe the whole as two halves, three thirds, four fourths. Recognize that equal shares of identical wholes need not have the same shape. | No change |
| Grade 3 |  |
| Common Core State Standards | Rhode Island Core Standards |
| 3.OA.A. 1 <br> Interpret products of whole numbers, e.g., interpret $5 \times 7$ as the total number of objects in 5 groups of 7 objects each. For example, describe a context in which a total number of objects can be expressed as $5 \times 7$. | 3.OA.A. 1 <br> Interpret products of whole numbers, e.g., interpret $5 \times 7$ as the total number of objects in five groups of seven objects each. For example, describe a context in which a total number of objects can be expressed as $5 \times 7$. |
| 3.OA.A. 2 <br> Interpret whole-number quotients of whole numbers, e.g., interpret 56 $\div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. For example, | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| describe a context in which a number of shares or a number of groups can be expressed as $56 \div 8$. |  |
| :---: | :---: |
| 3.OA.A. 3 <br> Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem. ${ }^{1}$ | No change |
| 3.OA.A. 4 <br> Determine the unknown whole number in a multiplication or division equation relating three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations $8 \times ?=48,5=\div 3,6 \times 6=$ ? | No change |
| 3.OA.B. 5 <br> Apply properties of operations as strategies to multiply and divide. Examples: If $6 \times 4=24$ is known, then $4 \times 6=24$ is also known. (Commutative property of multiplication.) $3 \times 5 \times 2$ can be found by $3 \times 5$ $=15$ then $15 \times 2=30$, or by $5 \times 2=10$ then $3 \times 10=30$. (Associative property of multiplication.) Knowing that $8 \times 5=40$ and $8 \times 2=16$, one can find $8 \times 7$ as $8 \times(5+2)=(8 \times 5)+(8 \times 2)=40+16=56$. (Distributive property). | 3.OA.B. 5 <br> Apply properties of operations to multiply. ${ }^{14}$ For example, when multiplying numbers order does not matter. If $6 \times 4=24$ is known, then $4 \times 6=24$ is also known (Commutative property of multiplication); The product $3 \times 5 \times 2$ can be found by $3 \times 5=15$ then $15 \times 2=30$, or by $5 \times 2=10$ then $3 \times 10=30$ (Associative property of multiplication); When multiplying two numbers either number can be decomposed and multiplied; one can find $8 \times 7$ by knowing that $7=5+2$ and that $8 \times 5=40$ and $8 \times 2=16$, resulting in $8(5+2)=(8 \times 5)+(8 \times 2)=40+16=56$ (Distributive property); When a number is multiplied by 1 the result is the same number (Identity property of 1 for multiplication). |
| 3.OA.B. 6 <br> Understand division as an unknown-factor problem. For example, find $32 \div 8$ by finding the number that makes 32 when multiplied by 8 . | No change |
| 3.OA.C. 7 | 3.OA.C. 7 |

## RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Fluently multiply and divide within 100 , using strategies such as the relationship between multiplication and division (e.g., knowing that 8 x $5=40$, one knows $40 \div 5=8$ ) or properties of operations. By the end of grade 3, know from memory all products of two one-digit numbers. | Fluently multiply and divide within 100 , using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5=40$, one knows $40 \div 5=8$ ) or properties of operations. By the end of grade 3 , know from memory all products of two singledigit numbers and related division facts. For example, the product 4 $x 7=28$ has related division facts $28 \div 7=4$ and $28 \div 4=7$. |
| :---: | :---: |
| 3.OA.D.8 | 3.OA.D. 8 |
| Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding. ${ }^{3}$ | Solve two-step word problems using the four operations for problems posed with whole numbers and having whole number answers. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies, including rounding. |
| 3.OA.D. 9 <br> Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations. For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends. | No change |
| 3.NBT.A. 1 <br> Use place value understanding to round whole numbers to the nearest 10 or 100. | No change |
| 3.NBT.A. 2 <br> Fluently add and subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction. | No change |
| 3.NBT.A. 3 | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Multiply one-digit whole numbers by multiples of 10 in the range 10-90 (e.g., $9 \times 80,5 \times 60$ ) using strategies based on place value and properties of operations. |  |
| :---: | :---: |
| 3.NF.A (Cluster Heading) <br> Develop understanding of fractions as numbers. | 3.NF.A (Cluster Heading) <br> Develop understanding of fractions as numbers for fractions with denominators $2,3,4,6$, and 8 . |
| 3.NF.A. 1 <br> Understand a fraction $1 / b$ as the quantity formed by 1 part when a whole is partitioned into $b$ equal parts; understand a fraction $a / b$ as the quantity formed by $a$ parts of size $1 / b$ | 3.NF.A. 1 <br> Understand a fraction $1 / b$ as the quantity formed by 1 part when a whole (a single unit) is partitioned into $b$ equal parts; understand a fraction $a / b$ as the quantity formed by $a$ parts of size $1 / b$. |
| 3.NF.A. 2 <br> Understand a fraction as a number on the number line; represent fractions on a number line diagram. <br> A. Represent a fraction $1 / b$ on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into $b$ equal parts. Recognize that each part has size $1 / b$ and that the endpoint of the part based at 0 locates the number $1 / b$ on the number line. <br> B. Represent a fraction $a / b$ on a number line diagram by marking off a lengths $1 / b$ from 0 . Recognize that the resulting interval has size $a / b$ and that its endpoint locates the number $a / b$ on the number line. | 3.NF.A. 2 <br> Understand a fraction as a number on the number line; represent fraction on a number line diagram. <br> A. Represent a unit fraction $\mathbf{1} / \mathbf{b}$, on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into $b$ equal parts. Recognize that each part has size $1 / b$ and that the fraction $1 / b$, is located $1 / b$ of a whole unit from 0 on the number line. <br> B. | 3.MD.C. 7 <br> Relate area to the operations of multiplication and addition. <br> A. Find the area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths. <br> B. Multiply side lengths to find areas of rectangles with whole number side lengths in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning. | No change |

## RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
C. Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths $a$ and $b+c$ is the sum of $a \times b$ and $a \times c$. Use area models to represent the distributive property in mathematical reasoning.
D. Recognize area as additive. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real-world problems.

| 3.MD.D.8 | No change |
| :--- | :--- |

Solve real-world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters.

## 3.G.A. 1

Understand that shapes in different categories (e.g., rhombuses, rectangles, and others) may share attributes (e.g., having four sides), and that the shared attributes can define a larger category (e.g., quadrilaterals). Recognize rhombuses, rectangles, and squares as examples of quadrilaterals, and draw examples of quadrilaterals that do not belong to any of these subcategories.

## 3.G.A. 2

Partition shapes into parts with equal areas. Express the area of each part as a unit fraction of the whole. For example, partition a shape into 4 parts with equal area, and describe the area of each part as $1 / 4$ of the area of the shape.

No change

## 3.G.A. 1

Understand that shapes in different categories (e.g., rhombuses, rectangles, and others) may share attributes (e.g., having four sides), and that the shared attributes can define a larger category (e.g., quadrilaterals). Compare and classify shapes by their sides and angles (right angle/non-right angle).Recognize rhombuses, rectangles, squares, and trapezoids as examples of quadrilaterals, and draw examples of quadrilaterals that do not belong to any of these subcategories.

## 3.G.A. 2

Partition shapes into parts with equal areas. Express the area of each part as a unit fraction of the whole. For example, partition a shape into four parts with equal area, and describe the area of each part as $1 / 4$ of the area of the shape.

| 5.NBT.B. 7 <br> Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. | 5.NBT.B. 7 <br> Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction and multiplication and division; relate the strategy to a written method and explain the reasoning used. |
| 5.NF.A. 1 <br> Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
a way as to produce an equivalent sum or difference of fractions with like denominators. For example, $2 / 3+5 / 4=8 / 12+15 / 12=23 / 12$. (In general, $a / b+c / d=(a d+b c) / b d$.)

## 5.NF.A. 2

Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. For example, recognize an incorrect result $2 / 5+1 / 2=3 / 7$, by observing that $3 / 7<1 / 2$

## 5.NF.B.B. 3

Interpret a fraction as division of the numerator by the denominator $(a / b=a \div b)$. Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. For example, interpret $3 / 4$ as the result of dividing 3 by 4, noting that 3/4 multiplied by 4 equals 3 , and that when 3 wholes are shared equally among 4 people each person has a share of size 3/4. If 9 people want to share a 50-pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie?
5.NF.B. 4

Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.
A. Interpret the product $(a / b) \times q$ as $a$ parts of a partition of $q$ into $b$ equal parts; equivalently, as the result of a sequence of operations $a \times q \div b$. For example, use a visual fraction model to show (2/3) $\times 4$
5.NF.A. 2

Solve word problems involving addition and subtraction of fractions referring to the same whole (the whole can be a set of objects), including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. For example, recognize an incorrect result $\mathbf{2 / 5}+\mathbf{1 / 2}=3 / 7$, by observing that $3 / 7<\mathbf{1 / 2}$

## 5.NF.B.B. 3

Interpret a fraction as division of the numerator by the denominator ( $a / b=a b$ ). Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. For example, interpret $3 / 4$ as the result of dividing 3 by 4 , noting that $3 / 4$ multiplied by 4 equals 3 , and that when three wholes are shared equally among four people each person has a share of size $3 / 4$. If nine people want to share a 50pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie?

## 5.NF.B. 4

Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.
A. Interpret the product $(a / b) \times q$ as $a$ parts of a partition of $q$ into $b$ equal parts; equivalently, as the result of a sequence of operations $a \times q \div b$. For example, use a visual fraction model

## RIDE

$=8 / 3$, and create a story context for this equation. Do the same with $(2 / 3) \times(4 / 5)=8 / 15$. (In general, $(a / b) \times(c / d)=a c / b d$.)
B. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.
5.NF.B. 5

Interpret multiplication as scaling (resizing), by:
A. Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication.
B. Explaining why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relating the principle of fraction equivalence $a / b=$ $(n \times a) /(n \times b)$ to the effect of multiplying $a / b$ by 1 .
and/or area model to show (2/3) x $4=8 / 3$, and create a story context for this equation. Do the same with $(2 / 3) \times(4 / 5)=$ $8 / 15$. (In general, $(a / b) \times(c / d)=a c / b d$.).
B. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.

## 5.NF.B. 5

Interpret multiplication as scaling (resizing), by:
A. Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication. For example, without multiplying tell which number is greater 225 or $3 / 4 \times 225 ; 11 / 50$ or $3 / 2 x$ 11/50?
B. Explaining why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relating the principle of fraction equivalence $a / b=(n \times a) /(n \times b)$ to the effect of multiplying $a / b$ by 1 .

## 5.NF.B. 7

Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. ${ }^{1}$
A. Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. For example, create a story context for $(1 / 3) \div 4$, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that $(1 / 3) \div 4=1 / 12$ because $(1 / 12) \times 4=1 / 3$.
B. Interpret division of a whole number by a unit fraction, and compute such quotients. For example, create a story context for 4 $\div(1 / 5)$, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that $4 \div(1 / 5)=20$ because $20 \times(1 / 5)=4$.
C. Solve real world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions, e.g., by using visual fraction models and equations to represent the problem. For example, how much chocolate will each person get if 3 people share $1 / 2 \mathrm{lb}$ of chocolate equally? How many 1/3-cup servings are in 2 cups of raisins?

| 7.RP.A. 1 <br> Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. For example, if a person walks $1 / 2$ mile in each $1 / 4$ hour, compute the unit rate as the complex fraction $1 / 2 / 1 / 4$ miles per hour, equivalently 2 miles per hour. | No change |
| 7.RP.A. 2 Recognize and represent proportional relationships between quantities. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
A. Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin.
B. Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships.
C. Represent proportional relationships by equations. For example, if total cost $t$ is proportional to the number $n$ of items purchased at a constant price $p$, the relationship between the total cost and the number of items can be expressed as $t=p n$.
D. Explain what a point $(x, y)$ on the graph of a proportional relationship means in terms of the situation, with special attention to the points $(0,0)$ and $(1, r)$ where $r$ is the unit rate.

## 7.RP.A. 3

Use proportional relationships to solve multi-step ratio and percent problems. Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.

## 7.NS.A. 1

Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.
A. Describe situations in which opposite quantities combine to make 0 . Examples: a hydrogen atom has 0 charge because its two constituents are oppositely charged.
B. Understand $p+q$ as the number located a distance $|q|$ from $p$, in the positive or negative direction depending on whether $q$ is positive or negative. Show that a number and its opposite

## 7.RP.A. 3

Use proportional relationships to solve multi-step ratio, rate, and percent problems. For example, simple interest, tax, price increases and discounts, gratuities and commissions, fees, percent increase and decrease, percent error.

## 7.NS.A. 1

Apply and extend previous understandings of addition and subtraction to add and subtract integers and other rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.
A. Describe situations in which opposite quantities combine to make zero. For example, a hydrogen atom has zero charge because its two constituents are oppositely charged; if you open a new bank account with a deposit of $\$ 30$ and then withdraw $\$ 30$, you are left with a $\$ 0$ balance.

7.G.A. 2

Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.
7.G.A. 2

Draw (freehand, with ruler and protractor, and with technology) twodimensional geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.

## 7.G.A. 3

Describe the shape of the two-dimensional face of the figure that results from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.

## 7.G.B. 4

Circles and measurement:
A. Know that a circle is a two-dimensional shape created by connecting all of the points equidistant from a fixed point called the center of a circle.
B. Understand and describe the relationships among the radius, diameter, and circumference of a circle.
C. Understand and describe the relationship among the radius, diameter, and area of a circle.
D. Know the formulas for the area and circumference of a circle and use them to solve problems.
E. Give an informal derivation of the relationship between the circumference and area of a circle.

## 7.G.B. 5

Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write simple equations and use them to solve for an unknown angle in a figure.

## 7.G.B. 5

Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and use them to solve simple equations for an unknown angle in a figure.

## RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

## 7.G.B. 6

Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.

## 7.SP.A. 1

Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.

## 7.SP.A. 2

Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions. For example, estimate the mean word length in a book by randomly sampling words from the book; predict the winner of a school election based on randomly sampled survey data. Gauge how far off the estimate or prediction might be.

## 7.SP.B. 3

Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability (mean absolute deviation) on either team; on a dot plot, the separation between the two distributions of heights is noticeable.

## No change

## 7.SP.B. 3

Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team and both distributions have similar variability (mean absolute deviation) of about 5 cm . The difference between the mean heights of the two teams $(10 \mathrm{~cm})$ is about twice the variability $(5 \mathrm{~cm})$ on either

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

|  | team. On a dot plot, the separation between the two distributions of <br> heights is noticeable. |
| :--- | :--- |
| 7.SP.B.4 <br> Use measures of center and measures of variability for numerical <br> data from random samples to draw informal comparative inferences <br> about two populations. For example, decide whether the words in a <br> chapter of a seventh-grade science book are generally longer than <br> the words in a chapter of a fourth-grade science book. | No change |
| 7.SP.C.5 <br> Understand that the probability of a chance event is a number <br> between 0 and 1 that expresses the likelihood of the event <br> occurring. Larger numbers indicate greater likelihood. A probability <br> near 0 indicates an unlikely event, a probability around $1 / 2$ indicates <br> an event that is neither unlikely nor likely, and a probability near 1 <br> indicates a likely event. |  |
| 7.SP.C.6 <br> Approximate the probability of a chance event by collecting data on <br> the chance process that produces it and observing its long-run <br> relative frequency, and predict the approximate relative frequency <br> given the probability. For example, when rolling a number cube 600 <br> times, predict that a 3 or 6 would be rolled roughly 200 times, but <br> probably not exactly 200 times. | No change |
| 7.SP.C.7 <br> Develop a probability model and use it to find probabilities of <br> events. Compare probabilities from a model to observed <br> frequencies; if the agreement is not good, explain possible sources <br> of the discrepancy. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
A. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.
B. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies?

## 7.SP.C. 8

No change
Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation.
A. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.
B. Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event.
C. Design and use a simulation to generate frequencies for compound events. For example, use random digits as a simulation tool to approximate the answer to the question: If $40 \%$ of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?

| 8.EE.A. 3 <br> Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. For example, estimate the population of the United States as $3 \times 108$ and the population of the world as $7 \times 109$, and determine that the world population is more than 20 times larger. | 8.EE.A. 3 <br> Use numbers expressed in the form of a single digit multiplied by an integer power of 10 to estimate very large or very small quantities, and express how many times as much one is than the other. For example, estimate the population of the United States as $3 \times 108$ and the population of the world as $7 \times 109$, and determine that the world population is more than 20 times larger. |
| :---: | :---: |
| 8.EE.A. 4 <br> Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology. | No change |
| 8.EE.B. 5 <br> Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed. | No change |
| 8.EE.B. 6 <br> Use similar triangles to explain why the slope $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $y=m x$ for a line through the origin and the equation $\mathrm{y}=\mathrm{mx}+\mathrm{b}$ for a line intercepting the vertical axis at $b$. | No change |
| 8.EE.C. 7 <br> Solve linear equations in one variable. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
A. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x=a, a=a$, or $a=b$ results (where $a$ and $b$ are different numbers).
B. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.

## 8.EE.C. 8

Analyze and solve pairs of simultaneous linear equations.
A. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.
B. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. For example, $3 x+$ $2 y=5$ and $3 x+2 y=6$ have no solution because $3 x+2 y$ cannot simultaneously be 5 and 6 .
C. Solve real-world and mathematical problems leading to two linear equations in two variables. For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.

## 8.F.A. 1

Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output. ${ }^{1}$

## 8.F.A. 2

## 8.EE. 8

Analyze and solve pairs of simultaneous linear equations.
A. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.
B. Solve systems of two linear equations in two variables algebraically (using substitution and elimination strategies), and estimate solutions by graphing the equations. Solve simple cases by inspection. For example, $3 x+2 y=5$ and $3 x+2 y=6$ have no solution because $3 x+2 y$ cannot simultaneously be 5 and 6 .
C. Solve real-world and mathematical problems leading to two linear equations in two variables. For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.

> Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of $1.5 \mathrm{~cm} / \mathrm{hr}$ as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.

## 8.SP.A. 4

No change
Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?

## Number and Quantity

| Common Core Standards | Rhode Island Core Standards |
| :--- | :--- |
| N-RN.A.1 <br> Explain how the definition of the meaning of rational exponents follows <br> from extending the properties of integer exponents to those values, <br> allowing for a notation for radicals in terms of rational exponents. For <br> example, we define $51 / 3$ to be the cube root of 5 because we want <br> $\left(5^{1 / 3}\right)^{3}=5^{(1 / 3) 3}$ to hold, so $\left(5^{1 / 3}\right)^{3}$ must equal 5. |  |

## (4) RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

```
F-IF.A.1
Understand that a function from one set (called the domain) to another
set (called the range) assigns to each element of the domain exactly one
element of the range. If }f\mathrm{ is a function and }x\mathrm{ is an element of its domain,
then f(x) denotes the output of f corresponding to the input }\textrm{x}\mathrm{ . The
graph of f is the graph of the equation }y=f(x)\mathrm{ .
```

## F-IF.A. 2

Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.

## F-IF.A. 3

Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0)=f(1)=1, f(n+1)=f(n)+f(n-1)$ for $n \geq 1$.

## F-IF. B Cluster heading

Interpret functions that arise in applications in terms of the context.

## F-IF.B. 4

For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.*

## No change

## F-IF.A. 2

Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context. For example, given a function representing a car loan, determine the balance of the loan at different points in time.

No change

## F-IF.B Cluster heading

Interpret functions that arise in applications in terms of the context
(linear, quadratic, exponential, rational, polynomial, square root, cube root, trigonometric, logarithmic).

No change

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| F-IF.B. 5 <br> Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function $h(n)$ gives the number of person-hours it takes to assemble $n$ engines in a factory, then the positive integers would be an appropriate domain for the function.* | No change |
| :---: | :---: |
| F-IF.B. 6 <br> Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.* | No change |
| F-IF.C. 7 <br> Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.* <br> A. Graph linear and quadratic functions and show intercepts, maxima, and minima,* <br> B. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.* <br> C. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.* <br> D. (+) Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.* <br> E. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.* | No change |

## (4) RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

## F-IF.C. 8

Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.
A. Use the process of factoring and/or completing the square in a quadratic function, where appropriate, to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.
B. Use the properties of exponents to interpret expressions for exponential functions. Apply to financial situations such as identifying appreciation and depreciation rate for the value of a house or car some time after its initial purchase. For example, identify percent rate of change in functions such as $y=(1.02)^{t}, y=$ $(0.97)^{t}, y=(1.01)^{12 t}$, and $y=(1.2)^{t / 10}$, and classify them as representing exponential growth or decay.

## F-IF.C. 9

Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.

## No CCSS standard

## F-IF.C. 8

Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.
A. Use the process of factoring and/or completing the square in quadratic and polynomial functions, where appropriate, to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.
B. Use the properties of exponents to interpret expressions for exponential functions. Apply to financial situations such as identifying appreciation and depreciation rate for the value of a house or car some time after its initial purchase. For example, identify percent rate of change in functions such as $y=(1.02)^{t}, y=(0.97)^{t}, y=(1.01)^{12 t}$, and $y=(1.2)^{t / 10}$, and classify them as representing exponential growth or decay.

## F-IF.C. 9

Translate among different representations of functions (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way. For example, given a graph of one polynomial function (including quadratic functions) and an algebraic expression for another, say which has the larger/smaller relative maximum and/or minimum.

## F-IF.C. 10

Given algebraic, numeric and/or graphical representations of functions, recognize the function as polynomial, rational, logarithmic, exponential, or trigonometric.

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

## F-BF.A. 1

Write a function that describes a relationship between two quantities.*
A. Determine an explicit expression, a recursive process, or steps for calculation from a context.*
B. Combine standard function types using arithmetic operations. For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.*
C. (+) Compose functions. For example, if $T(y)$ is the temperature in the atmosphere as a function of height, and $h(t)$ is the height of a weather balloon as a function of time, then $T(h(t))$ is the temperature at the location of the weather balloon as a function of time.*

| B. The dilation of a line segment is longer or shorter in the ratio given |  |
| by the scale factor. |  |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| G-SRT.B.4 <br> Prove theorems about triangles. Theorems include: a line parallel to one <br> side of a triangle divides the other two proportionally, and conversely; <br> the Pythagorean Theorem proved using triangle similarity. | No change |
| :--- | :--- |
| G-SRT.B.5 <br> Use congruence and similarity criteria for triangles to solve problems <br> and to prove relationships in geometric figures. | No change |
| G-SRT.C. 6 <br> Understand that by similarity, side ratios in right triangles are properties <br> of the angles in the triangle, leading to definitions of trigonometric <br> ratios for acute angles. | No change |
| G-SRT.C. 7 <br> Explain and use the relationship between the sine and cosine of <br> complementary angles. | No change |
| G-SRT.C. 8 <br> Use trigonometric ratios and the Pythagorean Theorem to solve right <br> triangles in applied problems.* | No change |
| G-SRT.D. 9 <br> (+) Derive the formula A = $1 / 2$ ab sin(C) for the area of a triangle by <br> drawing an auxiliary line from a vertex perpendicular to the opposite <br> side. | No change |
| G-SRT.D.10 <br> (+) Prove the Laws of Sines and Cosines and use them to solve <br> problems. | No change |

(4.) RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| G-SRT.D.11 <br> (+) Understand and apply the Law of Sines and the Law of Cosines to <br> find unknown measurements in right and non-right triangles (e.g., <br> surveying problems, resultant forces). | No change |
| :--- | :--- |
| G-C.A.1 <br> Prove that all circles are similar. | No change |
| G-C.A.2 <br> Identify and describe relationships among inscribed angles, radii, and <br> chords. Include the relationship between central, inscribed, and <br> circumscribed angles; inscribed angles on a diameter are right angles; <br> the radius of a circle is perpendicular to the tangent where the radius <br> intersects the circle. | No change |
| G-C.A.3 <br> Construct the inscribed and circumscribed circles of a triangle, and <br> prove properties of angles for a quadrilateral and other polygons <br> inscribed in a circle. | No change |
| G-C.A.4 <br> (+) Construct a tangent line from a point outside a given circle to the <br> circle. | No change |
| G-C.B.5 <br> Derive using similarity the fact that the length of the arc intercepted by <br> an angle is proportional to the radius, and define the radian measure of <br> the angle as the constant of proportionality; derive the formula for the <br> area of a sector. | No change |
|  | No change |
| G-GPE.A.1 |  |

## A. RIDE

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Derive the equation of a circle of given center and radius using the <br> Pythagorean Theorem; complete the square to find the center and <br> radius of a circle given by an equation. |  |
| :--- | :--- |
| G-GPE.A.2 <br> Derive the equation of a parabola given a focus and directrix. | No change |
| G-GPE.A.3 <br> (+) Derive the equations of ellipses and hyperbolas given the foci, using <br> the fact that the sum or difference of distances from the foci is <br> constant. | G-GPE.A.3 <br> (+) Derive the equations of ellipses and hyperbolas given the foci, using <br> the fact that the sum or difference of distances from the foci is constant. <br> (+) Use equations and graphs of conic sections to model real-world <br> problems.* |
| G-GPE.B.4 <br> Use coordinates to prove simple geometric theorems algebraically. For <br> example, prove or disprove that a figure defined by four given points in <br> the coordinate plane is a rectangle; prove or disprove that the point (1, <br> v3) lies on the circle centered at the origin and containing the point (0, <br> 2). | G-GPE.B.4 <br> Use coordinates to prove simple geometric theorems algebraically <br> including the distance formula and its relationship to the Pythagorean <br> Theorem. For example, prove or disprove that a figure defined by four <br> given points in the coordinate plane is a rectangle; prove or disprove that <br> the point (1, v3) lies on the circle centered at the origin and containing the <br> point (0, 2). |
| G-GPE.B.5 <br> Prove the slope criteria for parallel and perpendicular lines and use <br> them to solve geometric problems (e.g., find the equation of a line <br> parallel or perpendicular to a given line that passes through a given <br> point). | No change |
| G-GPE.B.6 <br> Find the point on a directed line segment between two given points <br> that partitions the segment in a given ratio. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| G-GPE.B.7 <br> Use coordinates to compute perimeters of polygons and areas of <br> triangles and rectangles (e.g., using the distance formula).* | No change |
| :--- | :--- |
| G-GMD.A.1 <br> Give an informal argument for the formulas for the circumference of a <br> circle, area of a circle, volume of a cylinder, pyramid, and cone. Use <br> dissection arguments, Cavalieri's principle, and informal limit <br> arguments. | No change |
| G-GMD.A.2 <br> (+) Give an informal argument using Cavalieri's principle for the <br> formulas for the volume of a sphere and other solid figures. | No change |
| G-GMD.A.3 <br> Use volume formulas for cylinders, pyramids, cones, and spheres to <br> solve problems.* | No change |
| G-GMD.B.4 <br> Identify the shapes of two-dimensional cross-sections of three- <br> dimensional objects, and identify three-dimensional objects generated <br> by rotations of two-dimensional objects. | No change |
| G-MG.A.1 <br> Use geometric shapes, their measures, and their properties to describe <br> objects (e.g., modeling a tree trunk or a human torso as a cylinder).* | No change |
| G-MG.A.2 <br> Apply concepts of density based on area and volume in modeling <br> situations (e.g., persons per square mile, BTUs per cubic foot).* | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| G-MG.A. 3 <br> Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).* | No change |
| :---: | :---: |
| No CCSS standard | G-MG.A. 4 <br> Use dimensional analysis for unit conversions to confirm that expressions and equations make sense.* |
| Statistics and Probability |  |
| Common Core State Standards | Rhode Island Core Standards |
| Statistics and Probability Conceptual Category <br> Statistics and Probability in the CCSS is starred for modeling at the conceptual category level. | Statistics and Probability Conceptual Category <br> Individual standards are starred for modeling in the Massachusetts Curriculum Frameworks. |
| S-ID.A Cluster heading <br> Summarize, represent, and interpret data on a single count or measurement variable. | S-ID.A Cluster heading <br> Summarize, represent, and interpret data on a single count or measurement variable. Use calculators, spreadsheets, and other technology as appropriate. |
| S-ID.A. 1 <br> Represent data with plots on the real number line (dot plots, histograms, and box plots). | No change |
| S-ID.A. 2 <br> Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| S-ID.A. 3 <br> Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers). | No change |
| :---: | :---: |
| S-ID.A. 4 <br> Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve. | No change |
| S-ID.B. 5 <br> Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data. | No change |
| S-ID.B. 6 <br> Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. <br> A. Fit a linear function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models. <br> B. Informally assess the fit of a function by plotting and analyzing residuals. <br> C. Fit a linear function for a scatter plot that suggests a linear association. | S-ID.B. 6 <br> Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. <br> A. Fit a linear function to the data and use the fitted function to solve problems in the context of the data. Use functions fitted to data or choose a function suggested by the context. Emphasize linear and exponential models. <br> B. Informally assess the fit of a function by plotting and analyzing residuals. <br> C. Fit a linear function for a scatter plot that suggests a linear association. |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| S-ID.C.7 <br> Interpret the slope (rate of change) and the intercept (constant term) of <br> a linear model in the context of the data. | No change |
| :--- | :--- |
| S-ID.C.8 <br> Compute (using technology) and interpret the correlation coefficient of <br> a linear fit. | No change |
| S-ID.C.9 <br> Distinguish between correlation and causation. | No change |
| S-IC.A Cluster heading <br> Understand and evaluate random processes underlying statistical <br> experiments. | Understand and evaluate random processes underlying statistical <br> experiments. Use calculators, spreadsheets, and other technology as <br> appropriate. |
| S-IC.A.1 <br> Understand statistics as a process for making inferences about <br> population parameters based on a random sample from that <br> population. | No change |
| S-IC.A.2 <br> Decide if a specified model is consistent with results from a given data- <br> generating process, e.g., using simulation. For example, a model says a <br> spinning coin falls heads up with probability 0.5. Would a result of 5 <br> tails in a row cause you to question the model? | S-IC.A.2 <br> Decide if a specified model is consistent with results from a given data- <br> spinning coin falls heads up with probability 0.5. Would a result of five <br> tails in a row cause you to question the model? |
| S-IC.B. 3 <br> Recognize the purposes of and differences among sample surveys, <br> experiments, and observational studies; explain how randomization <br> relates to each. | No change |
| S-IC.B.4 | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| Use data from a sample survey to estimate a population mean or <br> proportion; develop a margin of error through the use of simulation <br> models for random sampling. |  |
| :--- | :--- |
| S-IC.B.5 <br> Use data from a randomized experiment to compare two treatments; <br> use simulations to decide if differences between parameters are <br> significant. | No change |
| S-IC.B.6 <br> Evaluate reports based on data. | No change |
| S-CP.A Cluster heading <br> Understand independence and conditional probability and use them <br> to interpret data. | S-CP.A Cluster heading <br> Understand independence and conditional probability and use them to <br> interpret data from simulations or experiments. |
| S-CP.A.1 <br> Describe events as subsets of a sample space (the set of outcomes) <br> using characteristics (or categories) of the outcomes, or as unions, <br> intersections, or complements of other events ("or," "and," "not"). | No change |
| S-CP.A.2 <br> Understand that two events A and B are independent if the probability <br> of A and B occurring together is the product of their probabilities, and <br> use this characterization to determine if they are independent. | No change |
| S-CP.A.3 <br> Understand the conditional probability of A given B as P(A and B)/P(B), <br> and interpret independence of A and B as saying that the conditional <br> probability of A given B is the same as the probability of A, and the <br> conditional probability of B given A is the same as the probability of B. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| S-CP.A. 4 | No change |
| :---: | :---: |
| Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the twoway table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results. |  |
| S-CP.A. 5 <br> Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer. | No change |
| S-CP.B. 6 <br> Find the conditional probability of A given B as the fraction of B's outcomes that also belong to $A$, and interpret the answer in terms of the model. | No change |
| S-CP.B. 7 <br> Apply the Addition Rule, $P(A$ or $B)=P(A)+P(B)-P(A$ and $B)$, and interpret the answer in terms of the model. | No change |
| S-CP.B. 8 <br> $(+)$ Apply the general Multiplication Rule in a uniform probability model, $P(A$ and $B)=P(A) P(B \mid A)=P(B) P(A \mid B)$, and interpret the answer in terms of the model. | No change |
| S-CP.B. 9 | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.

| (+) Use permutations and combinations to compute probabilities of <br> compound events and solve problems. |  |
| :--- | :--- |
| S-MD.A.1 <br> (+) Define a random variable for a quantity of interest by assigning a <br> numerical value to each event in a sample space; graph the <br> corresponding probability distribution using the same graphical displays <br> as for data distributions. | No change |
| S-MD.A.2 <br> (+) Calculate the expected value of a random variable; interpret it as the <br> mean of the probability distribution. | No change |
| S-MD.A.3 <br> (+) Develop a probability distribution for a random variable defined for <br> a sample space in which theoretical probabilities can be calculated; find <br> the expected value. For example, find the theoretical probability <br> distribution for the number of correct answers obtained by guessing on <br> all five questions of a multiple-choice test where each question has four <br> choices, and find the expected grade under various grading schemes. | No change |
| S-MD.A.4 <br> (+) Develop a probability distribution for a random variable defined for <br> a sample space in which probabilities are assigned empirically; find the <br> expected value. For example, find a current data distribution on the <br> number of TV sets per household in the United States, and calculate the <br> expected number of sets per household. How many TV sets would you <br> expect to find in 100 randomly selected households? | No change |
| S-MD.B.5 <br> (+) Weigh the possible outcomes of a decision by assigning probabilities <br> to payoff values and finding expected values. | No change |

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
A. (+) Find the expected payoff for a game of chance. For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant.
B. (+) Evaluate and compare strategies on the basis of expected values. For example, compare a high-deductible versus a lowdeductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.

## S-MD.B. 6

(+) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).

## S-MD.B. 6

(+) Use probabilities to make fair decisions (e.g., drawing by lots or using a random number generator).

## S-MD.B. 7

$(+)$ Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).

## S-MD.B. 7

(+) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, or pulling a hockey goalie at the end of a game and replacing the goalie with an extra skater).

Rhode Island Core Standards are adapted from © 2017 Massachusetts Department of Elementary \& Secondary Education.
